COLOUR SYSTEM · TEXT NECK APP

The palette that works for *your* app

Built from your reference images. Clinically credible, approachable enough for daily use, with clear visual states for posture feedback.

CORE PALETTE

Deep Teal — Primary
#0D7377

CTAs, active states, key UI elements. Signals clinical credibility without cold blue.

Soft Teal — Secondary
#5EADB0

Progress indicators, illustrations, hover states. Lighter, friendlier tone.

Teal Wash — Surface
#D6ECEC

Card backgrounds, progress rings, "good posture" states. Light and calming.

Amber — Warning
#E8852A

"Moderate posture" state. Warm urgency — not alarming, just prompting action.

Alert Red — Error/Poor
#C94040

"Poor posture" state only. Use sparingly. Never for decorative purpose.

Warm Sand — Neutral
#C9BA9B

Secondary cards, icons, dividers. Adds warmth, prevents sterile feel.

Sand Light — Background
#F5F0E8

App background. Warmer than pure white — easier on eyes, less clinical.

Slate — Text
#2C3E50

All headings and primary text. Richer than pure black, softer contrast.

POSTURE STATE SYSTEM — THE CORE UI LOGIC

✓ **Good Posture**
Positive reinforcement

⚑ **Moderate**
Prompt correction

! **Poor Posture**
Urgent correction

Why this palette fits your app — and your brand

CLINICAL CREDIBILITY

Deep teal reads as medical without hospital blue. Positions you as evidence-based, not generic wellness.

POSTURE STATES ARE INTUITIVE

Green → Amber → Red maps directly to good/moderate/poor. Users don't need to read labels.

DAILY USE FRIENDLINESS

Warm sand background prevents clinical coldness. This is a daily habit app — it needs to feel inviting.

YOUR BRAND ALIGNMENT

Closer to Image 7 (your most relevant reference) but with more sophistication. Not a generic health app.

What to avoid (based on your references)

- **Dark purple/navy (Image 1 palette)** — feels too fintech. Wrong emotional register for a health/recovery app.
- **Pure dark mode (Image 3)** — looks great for service apps but clinical health tools need light-first UIs for legibility and trust.
- **Pink accent from your Soft Teal option (#FB90EB)** — too playful. Undermines the neurophysio-level credibility you're building toward.
- **Pure white backgrounds** — clinical and harsh. The warm sand (#F5F0E8) makes daily use easier on the eye and distinguishes you from generic health apps.
